

TOWAC Documentation:

On my first iteration, I used press fit and snap fit joinery, which I didn't like because it didn't allow for scalability and was very difficult to print without a 0.2 mm nozzle (1.75hr or 6.25 hr) because of the thin walls:

It was also not very customizable and required lots of printing, so I scrapped that idea and switched to the inserts you see in my current design. If you have any suggestion, feel free to DM me or paste in the comments.
